Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a burn-in socket assembly adapted to receiving an integrated circuit (IC), classified in class 324, subclass 755.
- II. Claims 7-11, drawn to a burn-in socket assembly for electrically connecting, classified in class 439, subclass 70.

The inventions are distinct, each from the other because:

Inventions I and II are materially different inventions. Group I is used for IC testing at high temperature whereas Group II is used for electrical connecting. Group I and group II have different structure components for different modes of operation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and search for group I is not required for group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
